

OPERATIONAL CONTINUITY FULL SERVICE MAINTENANCE

RELIABILITY. SAFETY. STABILITY.

Quality and value in one great service

Worst case situation: machine break down!

In a time where all production processes are depending on each other and machines are scheduled with 100% uptime, potential part failures can cause serious costs.

manager to secure high machine reliability. Preventive maintenance avoids unexpected down time. In addition it ensures a highly stable output quality throughout production. During the maintenance, Kurtz Ersä specialists, with deep understanding of the machine, will exchange all wear parts.

In the end the equipment stays a reliable and valuable asset which will continue to work with high efficiency and stability.

The key concern of production managers are sudden and unplanned machine down times due to unforeseen part failures. Consequences of such unexpected situations are delays of subsequent process steps and missed deadlines which lead to high costs. In order to prevent such sudden events, regular machine maintenance intervals are essential.

Through preventive maintenance, Kurtz Ersä will assist the production

Results that will move you forward

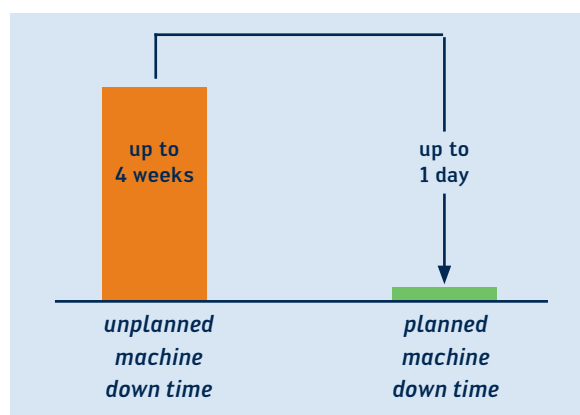

Issues

Our experience tells us that 80% of machine break downs are caused due to poor maintenance.

Implementation

- Certified Kurtz Ersä Service Technicians will spend 4-8 hours to exchange all wear parts, check of media and sensor technology at your machine
- Your machine will be maintained and equipped with original Kurtz Ersä parts
- All required activities are performed and documented in a check list for every interval so you receive the same quality each time, proven by a sticker displaying the execution and next maintenance date.

Down time scenario

Identification of machine break down reason, parts supply and exchange will consume up to 4 weeks. Small part issues can cause core component failures.
